Equity research and valuation report

BMRI / PT Bank Mandiri (Persero) Tbk

Valuation date: 2026-10-25 / Scenario: Base

Engine 5.0.1 / Research snapshot: rv5-920c3287cada8c77

Quote: 2026-10-23 / Financial basis: TTM 2026-06-30

1. Investment conclusion

Measure	Result
Model outlook / basis	BUY / VALUATION
Source status	RECONCILED
Market price	Rp 3,900
Fair value / indicative value	Rp 5,248
Upside / downside	34.6%
Bear / bull range	Rp 4,162 / Rp 6,576

Financial services use DDM at cost of equity; no corporate net-debt bridge. Actual eligible weights: 50% intrinsic / 50% industry relative.

Valuation BUY when upside >= the selected positive threshold; SELL when upside <= the selected negative threshold; HOLD between. Technical signals use separate price rules. WAIT means evidence or model requirements remain unresolved. Source assurance is a rule-based label, not a calibrated probability.

BUY >= 15% / SELL <= -15%

2. Business, methods and market value

Bank / bank. Capital-aware equity model. Equity distributions depend on earnings, reinvestment and regulatory capital.

Reported operating cash flow / IDR bn

Observed market closing price / IDR

Provider split/dividend-adjusted series, normalized to latest traded close; no second split adjustment.

Financial-sector operating cash flows and deposits are not corporate FCFF or net debt. Use issuer-specific regulatory capital

and credit-quality disclosures.

4. Forecast and cash-flow mechanics

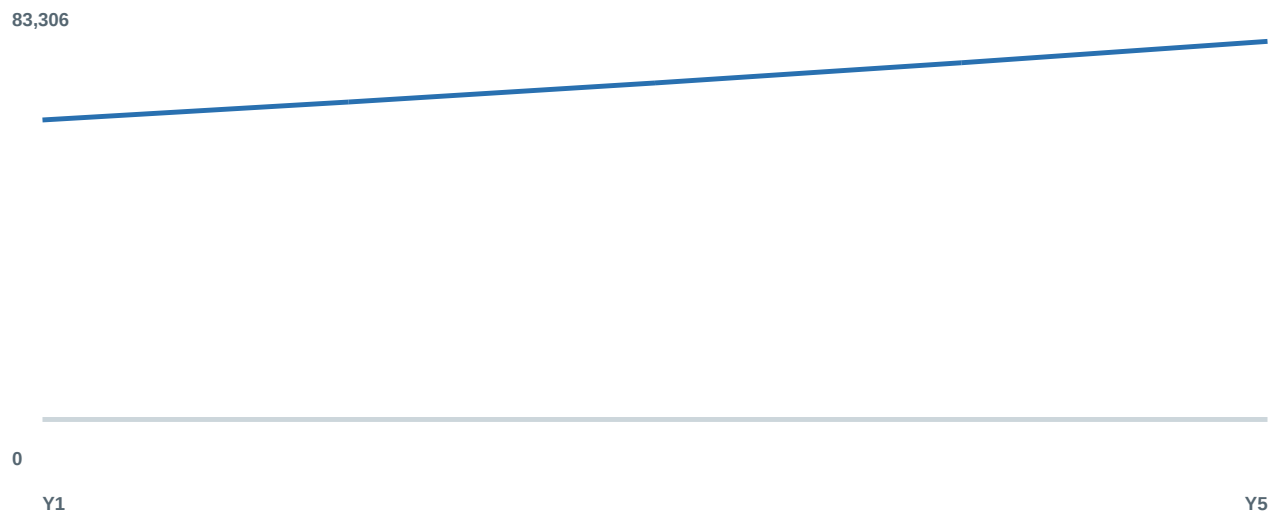

Rolling next 12 months from valuation date; historical annual/TTM figures are run-rate inputs, not fiscal-year forecasts.

Linked to the active intrinsic valuation.

Formula reference

Ke = risk-free rate + beta x total equity risk premium. DDM = PV dividends + PV terminal distributable earnings. Terminal distribution = earnings5 x (1+g) x (1-g/terminal ROE).

Residual income = current parent book equity + PV(earnings - Ke x opening book). ROE fades to Ke over five years. Relative value = eligible peer median x matched subject denominator; EV multiples are reconciled to common equity.

7. Conditional simulation

Conditional fair-value simulation, not a forecast of traded prices. Normal growth/margin/rate/g shocks; selected growth-margin correlation; lognormal peer-multiple shock; fixed method weights; EV-to-equity bridge recalculated after each multiple shock. Invalid economic draws rejected; negative equity floored at zero (limited liability). Final histogram bin includes the upper 0.5% tail.

Appendix B. Validation and risks

warning / PROVIDER_ASSUMPTION: Financial services: direct equity model; corporate EV bridge is inapplicable.

warning / PROVIDER_ASSUMPTION: IDX summary: 2026-10-23; volume 255521500; listed shares proxy diluted shares. A zero-volume summary does not reset the last-trade date.

Specific limitations: incomplete disclosures and leases, source revisions, peer business differences, earnings quality, terminal assumptions, liquidity and corporate actions. Generic models do not replace regulatory-capital, mining reserves or holding-company asset appraisals.

Appendix C. Source lineage and updates
